

AI Compass — Diagnostic

Know exactly which tasks to hand to AI, which ones to supervise, and which ones must stay human.

Atmart LLC

Advisory for companies
and NGOs
atmart.ltd

In two weeks you walk away with the **map of your tasks**, a **prioritised roadmap** and a **risk register** — not a demo. We also state, in writing, what must **not** be automated in your organisation.

WHO IT IS FOR

NGOs and programmes (donor reports, translation, qualitative analysis) · **Service SMEs** (accounting, insurance, real estate, agencies) · **Transport and delivery** (scheduling, multilingual communication with drivers, compliance) · **Schools and institutions** (administration, communication with families in several languages).

HOW IT WORKS

- 1 Scoping — 30 minutes**
Together we set the boundary: one team, one department, one process.
- 2 Observation — days 1 to 5**
Interviews with your teams, observation of the real work, measurement of volumes and turnaround times. No technical decision at this stage.
- 3 Analysis — days 6 to 9**
Every task is sorted: delegate, supervise, or keep human. Gain, effort and risk are quantified.
- 4 Findings workshop — 90 minutes**
We present the map, the roadmap and the risks to your decision-makers. You choose what comes next, or you stop there — no commitment.

WHAT IS NOT INCLUDED

Building the automations themselves (that is the **Guided pilot**), software licence purchases, and any promise of quantified results before the real work has been observed.

WHAT YOU RECEIVE

- The map of your tasks**
Volume, risk and decision for every task in scope.
- The prioritised roadmap**
What to do first, estimated gain, effort, order of play.
- The risk register**
Personal data, errors, compliance, vendor dependency.
- The internal rules**
What must never enter an AI tool; who is allowed to approve.
- The report, 10 to 15 pages**
Written for your decision-makers, not for engineers.
- The findings workshop**
90 minutes with your teams, in their language: English, Haitian Creole, French or Spanish.

from \$1,500

fixed price, agreed before we start

1 to 2 weeks. No obligation to continue after the findings workshop.

Launch offer: the first 2 organisations get a reduced rate in exchange for honest feedback and permission to cite the case — figures anonymised if you prefer.

WHY ATMART

A practitioner, not a salesman

A practising monitoring & evaluation consultant: we live the tasks we are discussing.

Proof before promises

Our pilots ship with an audit trail, quality tests and a known cost per task.

Your teams, their language

Everything is delivered and facilitated in English, Haitian Creole, French or Spanish.

Next step: a 30-minute conversation

You describe your work, we tell you plainly where AI can help in your case — and where it should stay out. If the answer is “nowhere”, we will say that too.

Atmart LLC — advisory on the use of artificial intelligence for companies and organisations. The diagnostic is an analysis service: it carries no guarantee of quantified results and does not replace legal, accounting or medical advice. A confidentiality agreement is signed before any access to your data. Non-contractual document — the prices shown are a starting point; the final proposal is issued after scoping.
