

AI Compass — Ongoing support

Every month: one new use case, quality verified, and a team that keeps getting better.

Atmart LLC

Advisory for companies
and NGOs
atmart.ltd

An automation that runs will decay if nobody watches it: data changes, models evolve, teams turn over. Ongoing support **keeps quality provable** and adds **one use case per month** — with no minimum term.

WHO IT IS FOR

Organisations coming out of a **Pilot** that want to keep moving · those already using AI tools **with no control and no written rules** · those whose teams change often and who must train continuously.

WHAT HAPPENS EVERY MONTH

- 1 One new use case**
One more task, designed and put into service with the same method: written criteria, human control, tests.
- 2 The quality review**
We replay your test sets against the existing automations and flag any drift before it hurts.
- 3 The cost table**
What you actually spent, per task and per month, with caps respected or exceeded.
- 4 A session with the team**
One hour: what works, what is stuck, how to supervise better. Career360 Team licences are included for practice between sessions.
- 5 Governance watch**
Your internal rules kept current as tools, prices or obligations change.

WHAT YOU RECEIVE

- One use case per month**
Chosen by you from your roadmap, delivered with its tests.
- The monthly report**
Measured quality, real costs, drift detected, decisions to make.
- Career360 Team licences**
Up to 5 members: your team's skills coach, in 4 languages.
- Up-to-date internal rules**
What must never enter an AI tool, revised at every change.
- Priority on our availability**
Your requests come before new engagements.
- The right to leave**
Cancel any time with 30 days' notice. Everything delivered is yours.

WHAT IS NOT INCLUDED

Building a heavy automation (that is a **Pilot**), 24/7 support, maintenance of your business software, and third-party licence purchases. Months do not roll over: an unused use case is not carried forward.

from \$1,000/month

monthly, cancel any time

The rate depends on the number of automations to watch and the size of the team supported.

No minimum term: if the support stops adding value, you stop — and you keep the tests, the audit trail and the documentation. That is the best guarantee that we have to stay useful every month.

WHY ATMART

Quality stays provable

Tests replayed every month: you know whether the tool is drifting, you don't guess.

Software with the service

Career360 Team licences are included — the team practises between sessions.

You stay free

30-day cancellation, deliverables are yours, no technical lock-in.

Next step: a 30-minute conversation

Tell us what already runs in your organisation and what you want to add. If a single pilot is enough and ongoing support would be overkill, we will say so — we would rather run a useful engagement than sell a comfortable subscription.

Atmart LLC — advisory on the use of artificial intelligence. Ongoing support is a monitoring and improvement service: quality is measured, never absolutely guaranteed. Third-party AI services may change their prices and rules; spending caps and manual fallbacks are reviewed in every monthly report. A confidentiality agreement covers the whole relationship. Non-contractual document — the final proposal is issued after discussion.
